Albany Hill Plan

To: Albany Parks, Recreation & Open Space Commission

I attended two public meetings on this plan and spoke at both of them. I suggested that there should be a comparison made between the amount of carbon dioxide the plan has been implemented and the amount that is being sequestered now. In other words what will be the climate impact of the plan. I did not get a satisfactory answer and strongly recommend that this be studied now before proceeding further. Your final plan should show an increase in carbon sequestration after the new trees have matured.

The LA fire is a big reminder of what the new hotter climate can do.

By way of introduction, I am a retired licensed Manufacturing Engineer who worked in climate related areas for a number of years.
